

Datasheet for

Bencon BCS 12 (Citric acid)

Description:

Bencon BCS 12 is an efficient agent for the removal of efflorescence. Bencon BCS 12 can be used for mild deacidification of concrete products. Bencon BCS 12 does not attack the concrete, only chalk deposits.

Usage:

Bencon BCS 12 is ready to use and is applied with a brush on the suffering concrete surfaces. Weak deposits are dissolved by the applying of Bencon BCS 12. It must be washed off with a regular hose pressure shortly after applying it, approx. 5-10 minutes.

Advantages:

- Quick, easy and safe.
- Does not attack the concrete.
- Dissolves chalk.

Limitations:

Very strong deposits should be cleaned mechanically, as the spending of Bencon BCS 12 would be too big.

Physical properties

Appearance :	clear liquid
