

Datasheet for

Protect B

Description:

Protect B is an environmental maintaining agent for casting boards and is quickly biodegradable.

Protect B is a concentrated emulsion to be applied on absorbing boards. When applying, either by spray or rolling of Protect B, the emulsion penetrates the surface of the wood and forms repelling layer. The thin coating of oil is sufficient to obstruct concrete from penetrating the board and thus preventing stickiness to the casting boards.

Usage:

Protect B is applied with spraying equipment or rolling. It is crucial that the product is applied in a thin uniform layer, to prevent surplus materials on the surface. First time treatment the product should be used concentrated.

Advantages:

Protect B increases the shelf life of the casting boards.
Protect B can be diluted with water up to 1:5.
Protect B leaves no contamination.

Dosage:

Protect B should be applied with spraying equipment or roller. The best result is achieved by applying a thin uniform layer.

Limitations:

May not be mixed with other products.

Physical properties:

Appearance :	white liquid
Odour :	neutral
pH :	8,0 +/- 1,0
Freezing point:	0°C
Density :	0,976 kg/l
